

AutoFlight Announces Landmark Commercial Deal with EVFLY for 205 eVTOL Aircraft

- *Record breaking eVTOL Pioneer sees advanced potential of the Middle East*
- *Global eVTOL pioneer AutoFlight has signed a deal for over 200 aircraft with EVFLY*
- *AutoFlight broke the world record for the longest eVTOL flight in late February*
- *Both Companies to explore pioneering eVTOL cargo services in the region*

Napa County, CA (16th March 2023): [AutoFlight](#), the global eVTOL (electric Vertical Take Off and Landing) pioneer, today announced it has entered into a contract with EVFLY, on the heels of its record breaking 250km all-electric flight. The agreement demonstrates the company's commitment to the Middle East region, which both parties believe could be a trailblazer for eVTOL services. The deal sees EVFLY initially purchase 205 Prosperity I and Prosperity Cargo Aircraft, with EVFLY operating the first 10 AutoFlight Cargo aircraft in the Middle East, in highly promising markets such as the United Arab Emirates and Saudi Arabia, with subsequent deployments in Asia and Africa.

AutoFlight's president Omer Bay-Yohay commented:

"This is a fantastic deal and illustrates just a few of the many geographies that will benefit from eVTOLs in both cargo and personal mobility. The team at EVFLY has a proven track record in successfully managing freight and cargo businesses and we're delighted to be partnering with them in what could be one of the first commercial eVTOL operations in the world."

The partnership is underpinned by EVFLY's comprehensive fleet management service which integrates the latest technology for eVTOL maintenance and operational efficiency. This will provide a unique solution for companies wishing to use eVTOL for commercial or private purposes.

EVFLY's founder and CEO, Yannick Erbs said of the partnership; "AutoFlight has a proven aircraft, as demonstrated by their world record flight and thousands of additional flight test miles. They are a natural choice for EVFLY, as both parties will bring expertise to the nascent eVTOL cargo and passenger markets."

The agreement follows quickly from AutoFlight's globally recognized achievement of the world's longest eVTOL flight in history with distance of 250KM / 155 miles on a single charge of the aircraft's lithium-ion batteries.

The flight, which took place at AutoFlight's eVTOL testing facility on February 23rd, consisted of 20 circuits on a predefined flight track, with the plane remotely piloted from the ground by AutoFlight's Flight Test team. Interestingly, while AutoFlight's Gen4 aircraft is fitted with the latest in state-of-the-art avionics, the aircraft also ran third-party avionics to record and verify the distance flown on ForeFlight, an independent system widely used in the aviation sector.

About AutoFlight

AutoFlight is a global high-tech startup dedicated to developing and manufacturing electric aerial vehicles to provide safe and reliable logistics systems and urban air mobility solutions for people. AutoFlight uses its experience with artificial intelligence, 5G, breakthrough materials, and advanced manufacturing in the drone market to drive developments in the eVTOL industry. The company has a diversified eVTOL product mix, focusing on large-scale logistics aircraft and passenger aerial vehicles.

AutoFlight is backed by European tech holding company [Team Global](#).
